Automated Manufacturing with High Tech Software

Harman Stove Runs Trumpf “Lift Master” Un-Attended With P.E.P. TECHNOLOGY

The international Harman Stoves Company has been using the P.E.P. software to automate their engineering, proto-typing, programming and manufacturing departments since 1998. The Trumpf Lift Master FMC automated load unload machine below is one of two lasers driven by the P.E.P. software.

TRUMPF LIFT MASTER

Letter by John Braddock

On May 5, 2003 John Braddock the Chief Information Officer at Harman Stove Company for more than 13 years wrote.

We wish to take this opportunity to thank Measurement Masters, Inc. for the exceptional experience our company has had using P.E.P. to automate our manufacturing facility.

We have used the P.E.P. software for 5 years to convert and correct engineering drawings, create nests for our proto-typing and production runs on our Trumpf lasers and P.E.P. has consistently performed the job we wanted - day in and day out, 2 shifts and often 3 shifts throughout the year.

Why we chose P.E.P.. Here's the short story. We evaluated our software requirements to run our Trumpf lasers comparing Trumpf's Tops 100 nesting software and other products to P.E.P. 's Automated Manufacturing Software before purchasing P.E.P. Because Tops 100 is Trumpf's nesting software we even attended the week long training in Massachusetts where we quickly discovered that Tops wasn't really all that “automatic”.

When we first saw P.E.P. we were literally **blown away** by the automatic features and advanced capabilities. When we purchased P.E.P. our operators began cutting parts the same day. As we gained momentum and more of a “warm fuzzy” feeling about P.E.P. we were seeing total laser cutting times slashed and our scrap for the same part quantities on a sheet went from the mid 60% to consistent 80%'s, and even some 90%'s.

P.E.P. support has always been extremely responsive. In today's fast paced and hard sell market, it's refreshing to deal with a company that's honest, forthright, and the product actually does what it claims to do. I encourage you to take a look at P.E.P. .

Cordually, John Braddock of Harman Stove Company.
