## Automated Manufacturing Software for Cutting Applications

### MATERIAL SAVINGS

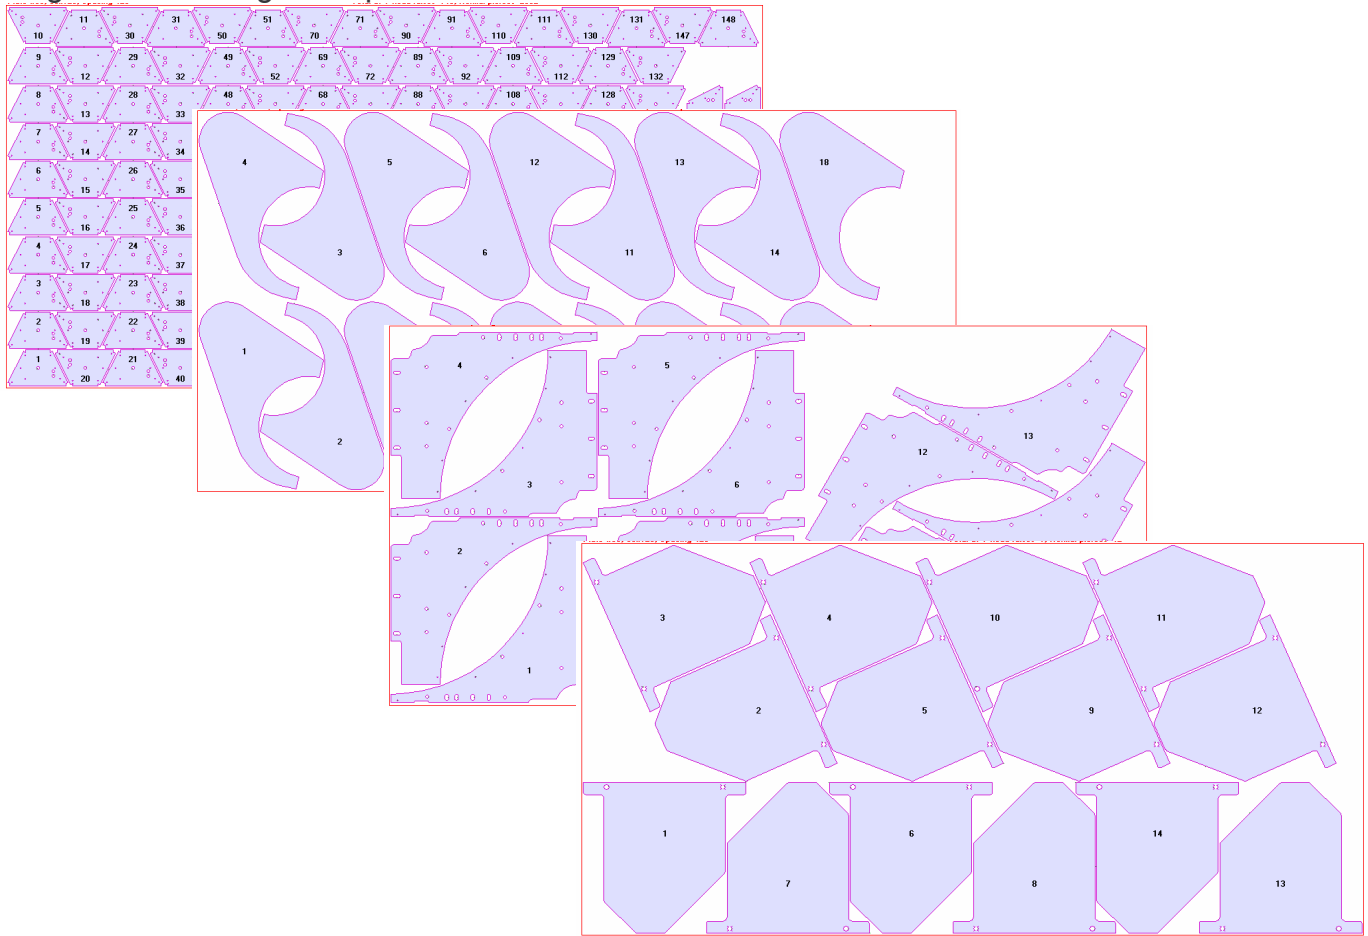

If you haven't downloaded the latest version of P.E.P.'s Automatic Nesting you need to. The P.E.P. Automatic Nesting software will out nest the next closest competitor's automatic nesting product by 10% to 20% in material yield more than 80% of the time. The improved material yield is a result of P.E.P.'s 18 year commitment to produce our own in-house proprietary automatic nesting engine that intentionally nest parts in patterns, columns and rows, filling gaps between parts so that the organization of the nest is not compromised. If your company is gridding parts or manually nesting large quantities of sheets the actual improvement in material yield will be greater than 20% most of the time. Added benefits to the automatic nesting results are:

- Better heat control and cut quality
- Shorter rapid distance to cut the nest
- More common and combine cutting
- Fewer head raises

### Single Part Nesting Examples

**P.E.P.'s Automatic Nesting software** has come a long way, but more important than that, you will find out all the other things P.E.P. does to improve your company's profitability.
