

Speciallaser has benefited greatly by changing to P.E.P. software approximately five years ago. Our processing times were significantly reduced. Not only was it faster it was also much easier.

Speciallaser, being a small company, it is important for us to be able to process parts as fast as possible to accommodate our customers. P.E.P. allowed us to do this. The nesting capabilities allows us to nest several jobs together, greatly reducing our material usage. All of our employees are able to operate P.E.P. without any extensive training. This is very important to us because we run several different shifts and can not justify having a programming department for each shift. We do all of our programming on day shift and the laser operators can also program allowing the programmer to sleep at night.

Speciallaser is very happy with measurement Masters and their support staff. They are always quick to respond to any of our programming needs.
